

## Ideation Phase

### Brainstorm & Idea Prioritization

Date	24-06-2025
Team ID	LTVIP2025TMID48302
Project Name	ToyCraft tales: tableau's vision into toy manufacturer data
Maximum Marks	4 Marks

#### Step-1: Team Gathering, Collaboration and Select the Problem Statement

1

#### Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

 5 minutes

##### PROBLEM

How might we develop an electrical dashboard to help users monitor, visualize, and optimize energy usage in real-time ?

#### Key rules of brainstorming

To run an smooth and productive session

Stay in topic.

Encourage wild ideas.

Defer judgment.

Listen to others.

Go for volume.

If possible, be visual.

## Step-2: Brainstorm, Idea Listing and Grouping

2

### Brainstorm

Write down any ideas that come to mind that address your problem statement.

🕒 10 minutes

2

Sravanthi

Real-time energy consumption visualization

Threshold-based alerts to prevent surges

Manikanta

Downloadable historical usage report

Interactive energy usage comparison charts

Priyanka

Integration with renewable energy sources

Automatic notifications for anomalies

Mahathi

Non-intrusive occupancy sensors for better utilization

Incremental energy usage recommendations

TIP

You can select a sticky note and hit the pencil [switch to sketch] icon to start drawing!

3

### Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go. Once all sticky notes have been grouped, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

🕒 20 minutes

TIP

Add customizable tags to sticky notes to make it easier to find, browse, organize, and categorize important ideas as themes within your mural.

Real-time Monitoring

Reporting and Analysis

Sustainable Energy Integration

## Step-3: Idea Prioritization

4

### Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

🕒 20 minutes

TIP

Participants can use their cursor to point at where sticky notes should go on the grid. The facilitator can confirm the spot by using the laser pointer holding the H key on the keyboard.

Importance

It's each of these ideas' value that gets done without any difficulty or cost, which would have the most positive impact?

Feasibility

Regardless of their importance, which tasks are more feasible than others? (Cost, time, effort, complexity, etc.)

Real-time energy consumption vs.

Threshold-based alerts

Historical usage reports

Interactive comparison charts

Renewable energy integration

Automatic anomaly notifications
